

FENTANYL

5 FACTS YOU NEED TO KNOW NOW

1.

Fentanyl is a powerful — and dangerous — lab-made opioid.

50x
stronger than
HEROIN

100x
stronger than
MORPHINE

2.

There are two kinds: legal and illegal.

Prescription fentanyl:
Used legally to treat severe pain

Illegally made fentanyl (IMF):
Sold on the streets with names like *Dance Fever, Dragon's Breath, Fire, Friend, Goodfellas, and Poison*

CAN BE:

- Crushed into powder and secretly mixed with other drugs
- Pressed into fake pills that look like the real thing

3.

Just 2 milligrams of illegal fentanyl can kill you — about as much as:

A few grains of salt

The tip of a pencil

Lincoln's ear on a penny

4.

Fake fentanyl pills look like real medicine, but even one pill can be deadly.

Don't be fooled!

THEY MAY:

- Come in bright or unusual colors
- Break or crumble easily
- Have fake numbers or markings

5.

Naloxone (Narcan) nasal spray can save a life in a fentanyl overdose.

CALL 911 AND USE NALOXONE RIGHT AWAY IF YOU SEE THESE SIGNS:

- Slow, shallow, or no breathing
- Pinpoint pupils
- Choking or gurgling sounds
- Limp body and weak pulse
- Cold, clammy, or bluish skin or lips
- No response

BE SAFE!

DON'T
take any pill unless a doctor prescribed it for you and it came from a licensed pharmacy.

DON'T
use illegal drugs — not even once. It's not worth the risk.

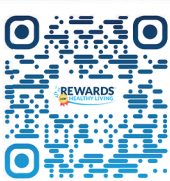

DO
get naloxone if someone you know might misuse opioids. It could save their life.

DO
get help if you have problems with substance use. Treatment works.
